PDF Form

5ᵗʰ April 2023

OVERVIEW

The objective of this project is to create a web application that allows students to download various academic forms in PDF format. The application will have a user-friendly interface and will be easily accessible to all students. Our aim is to simplify the process of obtaining academic forms and reduce the time and effort required to do so..

GOALS

1. We will create responsive user friendly user interface.
2. We also use best technologies that makes our application smooth and bugless.

TECHNOLOGIES

The web application will be built using HTML, CSS, JavaScript, and PHP. These technologies will enable us to create a dynamic and interactive user interface and provide a seamless experience for the users.

MILESTONES

Frontend

We will cover its frontend before midterm exam and then we will complete our second milestone.

Backend

After midterm exam we will build its backend. That is the main part that helps to create html page into a document.
